

PRETREATmaker IV

The PRETREATmaker IV is an automatic high-end pre-treatment system for professional users.

- Step Motor.
- 4 Valves which can be individually turned on or off.
- 16" W X 24"D Maximum Spray Area.
- Uni- and Bi-directional spraying.
- Automatic Cleaning Function.
- Additional Filter within the Cartridge to trap dirt from pump & tubes.
- Available with an optional scale which can be connected to the machine to allow you to see the amount of pre-treatment liquid used.

A special feature is the open interface that can be used to program the unit either directly through an order system or by printing a barcode. This optional feature will simplify and speed up workflow and allow the system to be operated with minimal training.
