

# The Fully Automated High Volume DTG System

PRETREAT, PRESS,  
PRINT, & CURE,  
with a single operator

Control your labor costs while customizing every shirt you print with the all-in-one Digital Line 2200 system from Brother, distributed exclusively through Hirsch Solutions, Brother's only nationwide distributor.

A single operator can now manage the entire process for up to 100 garments per hour, with each being a unique item. Using the onboard Linx system, with just one barcode, you can have complete control of the pretreating, pressing, printing and curing options for your unique products.

Orders and Barcodes Created

Shirts loaded on Digital Line

Barcodes scanned

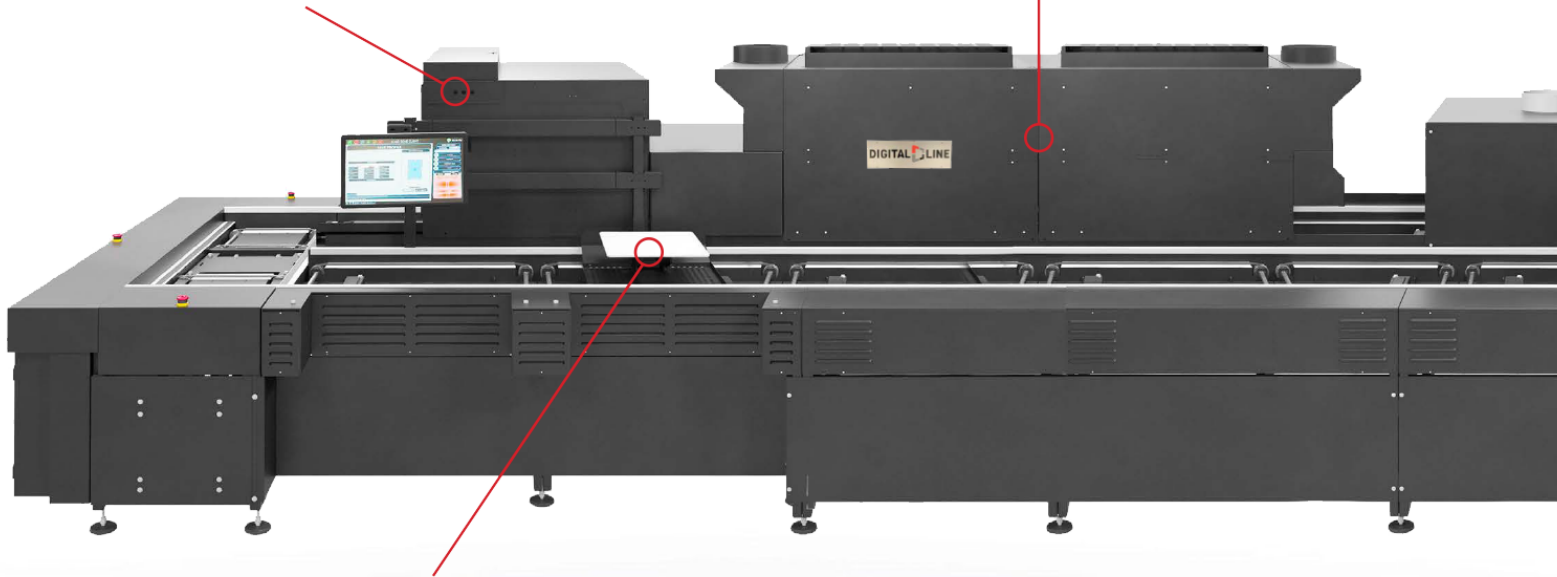

Pretreatment applied

Cured and pressed

Inline Pretreat with 3 spray width and dual pretreat fluids

Pretreat curing with Thermal camera for optimal settings per garment

Smart Platen transport to send platen to next available printer

SDK available for automated workflow processes
